

Introducing the Commanders from Faria

New in Marine Instrumentation

The Commander™ from Faria® Marine Instruments is a multi-function gauge that combines the features of several instruments into one spacing unit. A Tachometer or Speedo is shown as a standard analog display and an LCD displays information for the other functions including depth, fuel flow, water and air temperature and hourmeter.

These innovative instruments offer the

latest wave in marine electronics. The easy to read analog and LCD displays offer unparalleled accuracy achieved through the use of a digital stepper motor.

One look at them and you can see that the Commanders™ are different. These multifunction information centers offer the user a delicate balance between design and functionality. Their three-button design makes set-up, using and scrolling between functions very user friendly. Putting these gauges into your boat could not be easier. Easy to use, quick connectors make watertight connections a snap. No special drilling required. The Commander™ uses the industry standard 3 3/8" dash hole. Available in all of Faria® Marine Instruments Standard styles, the Commander™ has the look you want.

Faria® has recently partnered with PerfectPass® and now offers their patented cruise control system on the Commander™. You can activate and control your PerfectPass® through the push buttons on the Speedometer. Ski boat manufacturers can eliminate the need to purchase a separate control panel, saving dashboard space and costs.

Electronic Speedometer and a digital Depth Sounder

Functions include:

- Programmable Keel Offset
- Shallow and Deep Water Alarms
- Perfect Pass™ system

Tachometer with digital Fuel Flow Manager

Functions include:

- Fuel Flow
- Trip Fuel Log
- Total Fuel Log
- Fuel Remaining
- ERO Hourmeter
- Air Temperature
- Water Temperature
